

Attention Business Editors:
ZCL Composites Inc. Updates Lining Program

EDMONTON, June 29 /CNW/ - ZCL Composites Inc. is pleased to announce that Underwriters' Laboratories of Canada ("ULC") has officially published ORD C58.4 (Other Recognized Document) relating to double containment fiber reinforced plastic linings for flammable and combustible liquid storage tanks.

ORD C58.4 establishes the technical requirements for tank lining and will be used by ULC to evaluate tank lining systems prior to formal listing. The Company's lining system, which is now being field tested, will be submitted for testing and listing by ULC in accordance with ORD C58.4 later this summer.

Internationally, there is a very large and growing need for upgrading both underground and aboveground liquid storage, driven by environmental legislation and industry standards requiring secondary containment for storage of hazardous liquids. There are significant opportunities to establish ZCL's tank lining technologies as the preferred method of upgrading single wall tanks - the potential annual market in North America is estimated to be in excess of \$300 million - and, at this time, there are no competitive alternative products in the marketplace.

Tanks for storage of petroleum products are manufactured by the Company under the Underwriters' Laboratories of Canada approved standard ULC-S-615.

"This approval is a key milestone in the introduction of our lining system to the North American marketplace," says Mr. Ven Côté, President and CEO. "It paves the way for us to have our tank lining system listed by a product safety testing and certification organization which is recognized in Canada and internationally."

ZCL Composites Inc. trades on the Toronto Stock Exchange under the symbol "ZCL" and is Canada's largest manufacturer of fiberglass underground storage tanks. ZCL's complete fuel storage systems marketed under the "Prezerver" trademark carry a \$2 million warranty against pollution.
