

## ZCL Receives UL & ULC Listing for Tank Lining System

For Immediate Release

Edmonton, Alberta August 25, 2006... ZCL Composites Inc. is pleased to announce that it has been notified of the formal listing by Underwriters Laboratories in the United States ("UL") of the *Phoenix Lining System*® and Underwriters Laboratories of Canada ("ULC") of the *LIFELINER System*™ in accordance with recognized industry standards. These listings pave the way to market additional UL / ULC listed products that will begin to add to our revenues before year end as originally communicated and represents another milestone in the continued growth of ZCL.

These unique internal fibreglass systems allow "in-situ" upgrades of a single wall tank to a secondary contained lining system using a patented three dimensional glass fabric combined with a proprietary state-of-the-art curing system. There is a very large and growing need for upgrading both underground and aboveground liquid storage, driven by environmental legislation and industry standards requiring secondary containment for storage of hazardous liquids. There are significant opportunities to establish ZCL's tank lining technologies as the preferred method of upgrading single wall tanks and, to our knowledge, there are no comparable lining alternative products available in the marketplace.

Further opportunities exist in the corrosion free storage of new fuels including the new ethanol blended fuels and other blends now being legislated in certain parts of Canada and the USA. For example, we understand Ontario, Saskatchewan, Manitoba and the federal government of Canada have announced their intention to reach a target of 5% ethanol in all gasoline sold across the country within the next three to five years. Given that Fibreglass Reinforced Plastic tanks built prior to 1979 are not able to store these types of fuels, our *LIFELINER System*™ and *Phoenix Lining System*® puts us in a position to take advantage of the many opportunities for future tank upgrades.

"The potential for generating considerable revenues from this technology is very exciting," says Ven Côté, President of ZCL Composites Inc. "The UL and ULC approval is a critical step that opens the door to establish the *LIFELINER System*™ and the *Phoenix Lining System*® as the preferred method of secondary containment of existing single walled tanks across Canada and the US. This new generation of environmental protection will change our industry, and with this approval, we are very anxious to commence commercial activity in this area."

ZCL Composites Inc. trades on the Toronto Stock Exchange under the symbol "ZCL" and is Canada's largest manufacturer of fiberglass underground storage tanks. ZCL's complete fuel storage systems marketed under the "Prezerver" trademark carry a \$2 million warranty against pollution.
