

PROTEKTOR II

The user friendly tank package...

Years of valuable customer input has resulted in tank designs that are perhaps the most user friendly on the market! Tanks like our Protektor II which are designed exclusively for safe secondary contained storage of produced water. Incorporating dozens of suggestions from oilfield experts, the Protektor II is easier to use, safer for the environment and longer lasting than other aboveground tank.

Easily accessible inlet and discharge piping.

Additional features include; concrete pad with bolts in place, calibrated mechanical liquid level gauge, battery cables, ground wire and screened vents.

Features

- Fiberglass primary storage & 100% secondary containment
- Gas fired integral heating system
- Engineered precast concrete mounting pad or optional skid frame assemblies
- Integral electrical grounding system
- Moveable and reusable
- Urethane foam insulation with UV inhibitor coating
- Corrosion resistant to produced water & most chemicals
- Integral "Go-No-Go" leak indicator
- Enclosed inlet and outlet piping assembly
- Integral 1 to 1 mechanical EZ-Read level gauge
- Minimal site preparation required
- Meets G-55 Guidelines
- Common sizes from 25 BBL – 200 BBL.

New lower cost design...

PROTEKTOR II

The ultimate storage tank package

still delivers twice the service life of other tanks!

Introducing **PROTEKTOR II**

The ultimate storage tank package...

Now you can get all the long lasting, user friendly features of our popular **PROTEKTOR™** (110% secondary containment storage tank package) in a new cost effective design.

The new **PROTEKTOR II** is a **100% secondary containment tank** that allows you to comply with current environmental regulations for less, while greatly reducing your risk of expensive leak-related clean-ups over the long haul. Like all ZCL tanks, the **PROTEKTOR II** is made from corrosion resistant fiberglass, using the same "best quality" resins, components and accessories as our top selling **PROTEKTOR™**.

The best oilfield tank just got more affordable

New lower cost...

The only difference, **PROTEKTOR II** conforms with recent changes to government guidelines for **100% secondary containment**. Simply put, it cost us less to make. The resulting savings are passed directly to you, reducing your cost. You get the same safe, durable technology that the oil patch has come to expect from ZCL's products, plus more than twice the service life of bare steel tanks.

Aboveground secondary containment. Design exclusively for safe storage of produced water and chemicals.

Simply will not corrode!

Manufactured to API-12P guidelines and meets the requirements of AEUB's G-55 "Storage Requirements for the Upstream Petroleum Industry."

Corrosion resistant to produced water and most chemicals

Quick and easy set-up, less than an hour typically required

Easy to move and reuse (1/2 the weight of other tanks)

Field repairable

The corrosion free advantage...

Corrosion Free... 100% premium grade double wall Fiberglass Reinforced Plastic (FRP) construction (no filler) provides corrosion free internal and external service. ZCL tanks are suitable for 15% Hydrogen Sulfide content at 170° F.

Quality assurance...

Built to conform to the highest standards, each ZCL tank is pressure, vacuum or hydrostatically tested to ensure endurance in the most adverse conditions.

Customer Satisfaction Guaranteed!
